

LUBRITHERM® ALL-TEMP BIODEGRADABLE HYDRAULIC FLUID

VEGETABLE OILS IN HYDRAULIC FLUIDS: A MISGUIDED ECO-FRIENDLY SOLUTION

Turning to nature might seem the right approach when seeking environmentally conscious alternatives. Yet, "natural" doesn't always equate to "safe". While the market is rife with vegetable oil-based products, they aren't the green solutions they're often touted to be. It's crucial to note that even petroleum is natural. The U.S. EPA Office of Emergency Management emphasizes that "The environmental damage caused by spills of animal fats and vegetable oils mirrors or even surpasses the harm caused by petroleum oils." Just because a substance is from nature doesn't guarantee its eco-friendliness.

Lubritherm® Hydraulic Fluid: Beyond Vegetable Oils

Offering an alternative devoid of vegetable oils, Lubritherm® Hydraulic fluid boasts:

- Stellar performance that stands the test of time with a 10-year service life.
- Imperviousness to fire, ensuring optimal function under intense temperatures and pressures.
- Designed with the environment in mind, causing no harm to water, soil, or sewers.
- Recognized for its eco-friendliness with an endorsement from Environment Canada.
- A unique mechanism that fights bacteria by consuming their oil-based food source.
- Compatibility and easy integration with all standard hydraulic seals and metals.

Proudly a member of the All-SAFE™ product series.
